

Group #: 15

Name:

Lawford Liu - hliu204@uic.edu

Jason Zhang - gzhang37@uic.edu

Hilda Mendoza-Avila - hmendo3@uic.edu

Aksa Chacko - achack8@uic.edu

Changes made in the Original code:

- GameInfo data member
 - playerId, OpponentId, playerPlays, OpponentPlay
 - Int TypeOfMessage for instruction when receiving new gameinfo what should be done with it
 - An ArrayList of clients on the server for update Gui clients list
- Gui update for both client and server;
 - Add a few Consumer<Serializable> object to make an easier call to update information according to instruction for gameinfo(Using Gui)
 - Add new Scene for list of clients waiting for challenges
 - Proceed to the game when successfully challenge or challenged
 - Clear listView whenever update ArrayList and adding a new LstItems
- Server
 - Receive messages from client's challenges
 - Check status for challenged client then send them both the "setgame" instruction
 - Receive plays
 - Wait for another player's plays
 - Had both plays, evaluate
 - Receive client's quit or join information
 - Update accordingly
- Client
 - Receive instruction of successfully game challenge
 - Set game scene
 - Sit and wait for plays
 - Receive message need to be posted to the game status(evaluation of the games)
 - Update ListView accordingly
 - Receive message opponent quit
 - Clean all gameinfo for this round
 - Back to clients choosing scene then update List of clients online accordingly
 - Quit
 - Set info.Onlineplayer to 0(offline) 3

The original specification of PJ# 3

- clientThread and Client passing GameInfo each other to communicate
- clientThread update ServerGui by calling callback.accept()
- Client update ClientGui by calling callback.accept()
- GameInfo contain Player_Plays and String that the message is going to display
- TheServer accept(make connection to) Clients, update ServerGui
 - Adding all the clients (clientThread) to an ArrayList

Member Contribution

Lawford Liu - Pdf writeup, ClientGui, ServerGui, helped with Server Class

Jason Zhang - ClientGui, Client, helped with Server Class

Aksa Chako - Server Class

Hilda Mendoza-Avila - Server Class

Server - 1) client1,2,3,4 connect to server. Update join information

//clientThread &clientsGui&ServerGui - gameinfo.instruction == "join" (which update message) - (or maybe not needed)

Client -1) Scene choosing opponent

//clientGui

Client -2) 1 challenge 3, send gameinfo.opid
gameinfo.instruction"challenge" to Serverthread

//clientGui -> client -> ClientThread -> Server

Server - 2) receive challenge message. Check both
clientThread.gameinfo.status for availability. -----if (yes) {set
status to false}

//Serverthread -> clientThread

Server -3) Update client1,3 clientThread.gameinfo.opid.

// ServerThread

Server -4) send tmp.gameinfo.instruction(set client Scene) to both clients

//ServerThread -> client ->clientGui

Client -3) send plays to server

//Client -> clientThread -> ServerThread

Server -5) receive 1 plays, check Id , put its play to clientthread.gameinfo.play and clientthread.gameinfo.opplays to its op id.

//clientthread

Server -6) check if they have both plays, if yes call whowon();

//clientthread

Client -4) send plays to server

//client -> clientthread

Server -7) receive 1 plays, check Id , put its play to clientthread.gameinfo.play and clientthread.gameinfo.opplays to its op id.

//clientthread

Server -8) check if they have both plays, if yes call whowon();

//clientthread

Server -9) set both clients.gameinfo.instruction/opId/plays/opplays to default. Send "whowon" to clients with gaminfo.instruction "endGame" (should also display message of who won)
//clientthread

Client -5) back to choosing opponents
//client -> clientgui

Client -6) quit. Send message to Server
// clientgui -> client -> clientthread -> serverthread

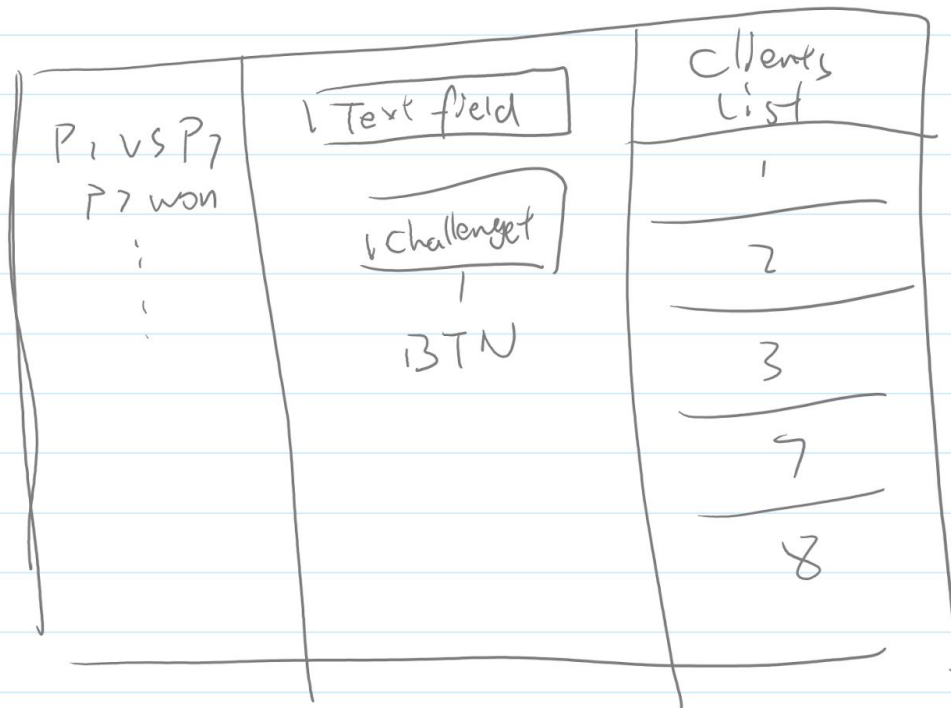

Server -10) update clients list , send back to client for updates
//???(update list) -> clientthread -> client -> clientGui

Client -6) updates client list
//client -> clientGUI

GI.instruct == 'play'
GI-plays == rock

1) update plays

2) Evaluate

3) set instruction to "end"
send 'who won'
set plays default

1) who won

2) instruction (back to choosing scene)

3) Set OPID, plays, opplays default
for both in clientthread
